

READ ME FIRST

This version of the document titled 'Standard Methodology for Conducting Watershed Analysis Manual, Version 4.0' (Washington Forest Practices Board, November 1997) is machine-readable, rich-format, and platform-independent, encoded as screen optimized Adobe Acrobat files.

The current series of screen optimized files are low resolution documents (75dpi) that lack crisp line art and sharp graphics. While every attempt was made during the document conversion process (paper --> electronic) to create an exact replica of the original, some changes occurred. The nature of the changes are minor, and do not alter the meaning or communications intent of the document. Overall, minor changes in appearance [e.g., type style (italics, bold), type face (font substitution), line art/tables ('jaggies'), graphics, line spacing, kerning] do not significantly affect document usability or technical communications integrity.

The original version of the watershed analysis manual (version 4.0) was primarily set in:

- Century Schoolbook 12pt plain
- **Century Gothic 18pt bold**
- Symbol 12pt plain αβχδεφγη^{oooo}

Other fonts make minor appearances in the original paper document.

Document appearance of the screen optimized Acrobat version depends on installed fonts, and 'the look' may vary with display devices.
